SPRING WEBINAR
MEASURING WELL-BEING

WHEN:
Wed. 5/16/18 at 12 PM (EST)

The aim of a Total Worker Health® approach is to advance worker well-being. However, there is no consistent definition for the concept of worker well-being nor tools for measuring overall worker well-being. CDC’s NIOSH and the RAND Corporation are collaborating to develop a framework and operationalize indicators for worker well-being. The initiative started a few years ago with a multi-disciplinary literature review, resulting in a proposed framework that recognizes worker well-being as a subjective and objective phenomenon inclusive of experiences both within and beyond work contexts. Based on this framework and engagement with an expert panel, NIOSH and RAND have developed a provisional definition of worker well-being and a survey instrument to measure worker well-being. The aim is for the tool to be valuable to employers, researchers, policymakers, workers, and communities to assess workforce well-being.
